Database Migrations to AWS

Reduce your risk with certified experts guiding your migration.

By 2022, Gartner predicts 75% of databases will be deployed to the cloud. The benefits of the cloud — including increased capabilities, scalability and flexibility — are driving organizations to transform and migrate to cloud technologies, regardless of their size or industry. Unfortunately, most companies lack the skills, competencies, experience or resources to perform a migration while minimizing risk and avoiding downtime.

That's where Rackspace Technology comes in. As part of the migration service, Rackspace Technology will discuss your business goals, develop a migration strategy, prepare a detailed migration plan, manage the transformation and migration process and put each database back into production.

Experts Dedicated to Your Success

Rackspace Technology is uniquely positioned to provide expertise, reduce risk and increase overall confidence around reaching your database migration and transformation goals. Database and AWS specialists will assess your database environments and determine which set of AWS services will fit your use-case. AWS services include Amazon Aurora, Amazon RDS, Amazon Redshift and Amazon DynamoDB.

Key Benefits

• A customized, best-fit migration solution aligned to your business goals and timeline

• Reduced risk and disruption with a team of AWS certified database migration experts

• An efficient and predictable database move using a proven methodology

• Accelerated innovation by focusing on the application rather than the databases

Key Features

• **Assessment workshop:** The process starts with understanding your database landscape through consultant-led workshops, taking into account overall business goals and targets. The assessment includes a detailed discovery of the current and future-state database environments, as well as a deep dive into the database objects and application touchpoints.

• **Migration/transformation plan:** Based on the findings of the assessment workshop, database migration tooling output and an overall migration and/or transformation plan is developed and provided.

• **Migration execution:** Once a migration plan has been developed, Rackspace Technology will lead the migration, leveraging a continuous migration and transformation process for making changes and validating the results to determine additional changes that might be necessary. Once a steady state is achieved, full application and database testing is performed and a successful switchover occurs.

• **Manage and optimize:** Rackspace Technology offers multiple options to customers for the level of support they need for their database environments. This includes infrastructure management, all the way to the database itself.

About Rackspace Technology™

Rackspace Technology is your trusted partner across cloud, applications, security, data and infrastructure.

• A leader in the 2020 Gartner Magic Quadrant for Public Cloud Infrastructure Professional and Managed Services, Worldwide

• 2,500+ cloud professionals

• 1,600 AWS technical certifications worldwide

• 14 AWS Competencies

• Hosting provider for more than half of the Fortune 100

• 20+ years of hosting experience

• Customers in 120+ countries

Fanatical Experience™

Experts on your side, doing what it takes to get the job done right. From first consultation to daily operations, Rackspace Technology combines the power of always-on service with best-in-class tools and automation to deliver technology when and how you need it.

Take the Next Step

Let's talk about how Rackspace Technology database migration expertise for AWS helps you achieve your goals.
